

Application: Full height partitions providing office space and fire resistant glazing

Airport Hanger Fit out, Farnborough Airport

Contractor: Ellmer Construction

Architect: Reid Architecture

The hanger was built with no internal division providing office space. The client required additional space so created separate areas with internal glass partitions spanning 6.0m into the roof space.

Fendor FineLine curtain wall with toughened glass was used with applied film for privacy. SwingLine doors were used to provide access doors between areas.

Between the hanger and offices fire screens were built into the compartment wall providing 60 minutes integrity and insulation. Again FineLine satisfied this requirement glazed with insulating fire glass.
