

Application: Fire protection behind the retained façade and internal atrium space to the open plan office areas

Waverleygate, Edinburgh

Contractor: Balfour Beatty Construction Ltd

Architect: Hugh Martin Partnership

By retaining the existing stone façade and creating the 'glass box' inside the walls, the client was able to build additional floors without disturbing the features of this building.

Fire protection was a must to the perimeter elevations. Fendor FineLine curtain wall and double glazed units providing 60 minutes integrity were used. Floor zones were created with opaque glass and fire protection.

The internal atrium utilised the same framing system with 10mm Pyrolithic.

The project comprised over 2000m² of fire resistant glazing and secondary structural steelwork provided by Fendor.
